REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Ramsby et al. teach the basic detergent solubilization process including extraction of nuclear proteins with a composition comprising 1% Tween-40®, 0.5% deoxycholate and 10 mM NaCl; this is described in the specification as prior art. The claimed method and kit use a salt concentration that is 7.5 to 50 times more than taught in the prior art. There is no teaching or suggestion that such increased salt concentration would give the results shown in the examples, particularly in view of the knowledge that too high a salt concentration will denature the desired proteins. Warren was cited for his teaching at column 8, lines 50-53 that nuclear matrix proteins are insoluble in nonionic detergents and deoxycholate but this does not provide any motivation to increase the salt content of the extraction buffer. Lion Corp. was cited to show a composition having a pH of 5 to 7 comprising nonionic surfactant or hydrocholic acid but not both.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
